

Quality Policy Statement

Thame Engineering Company Limited is committed to the effective implementation and maintenance of a quality management system which satisfies the requirements of BS EN ISO 9001:2015. We are further committed to ensuring that we satisfy all legal/statutory requirements as applicable and to enhancing customer satisfaction. We will endeavour to ensure that personnel and applicable interested parties are aware of any relevant legal/statutory requirements as applicable.

By adopting a 'process' approach we will promote a greater understanding and a more effective control of inputs and outputs and the effects on stakeholders.

By process performance evaluation and monitoring we will provide a platform for continual improvement and a framework for setting objectives.

By engaging in risk-based thinking, we will strive to mitigate business risks and embed this thinking in our quality management system elements and design. The senior management team are committed to continual improvement of the quality management system.

In response to the London declaration of February 2024, Thame Engineering Company Limited has considered stakeholder requirements including any that interested parties of the organisation may have related to climate change. It has also determined whether climate change is a relevant issue in the context of its operations and interfaces. It continues to monitor these issues systemically going forward, in order to respond to emerging situations, as they may develop.

This policy and the Quality Management System are fully endorsed and supported by the senior management team.
